# COMMERCIAL AND GOVERNMENT ASSET MANAGEMENT

LOCATION AND SITUATIONAL AWARENESS OF OFFICE AND INDUSTRIAL ASSETS

www.assettrackingsystemsiot.com

ASSETTRACKER^{IoT} SOFTWARE

AssetTracker^{IoT} software is designed based on our staff's 30+ years of asset management experience, and inputs from government and commercial organizations worldwide, fully developed and ready for delivery.

1 Manages the complete life-cycle of assets through final disposition.

2 Supports barcoding and RFID-tagging of assets for streamlined and accurate management of office and industrial assets.

3 Manages asset assignments, check-in and check-out.

4 AssetTracker^{IoT} defines the location and status of all assets at all times.

5 Continuous monitoring of asset statuses to trigger inspection, calibration and maintenance cycles and their performance.

6 Asset data and monitoring displays as Dashboard for instant visibility of all assets and their tasks, including messages, alerts and calendar.

OFFICE ASSETS

Office assets can be managed based on serial # or other Unique ID # and/or by attaching barcode or RFID labels that uniquely identify assets. Asset data from backend procurement and ERP systems populates AssetTracker^{IoT}.

1 Asset data is exported from backend system(s) to establish initial database registry within AssetTracker^{IoT}.

2 Assets are physically inventoried to reconcile the existence of assets and data about assets, including serial #'s and data identifiers.

3 Barcode, RFID or barcode/RFID labels are attached to each asset for streamlined management for future asset management requirements.

4 The status of assets is maintained and tasks including inspections, calibrations and maintenance are monitored, with alerts, messages and calendar of events.

5 Maintenance and insurance agreements are monitored and maintained.
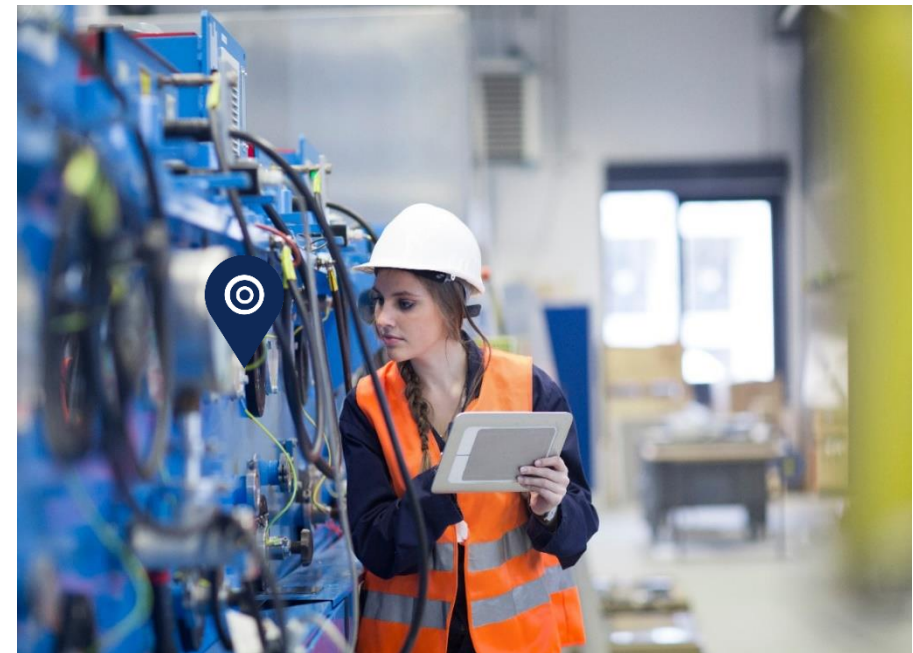

INDUSTRIAL ASSETS

Industrial assets can be managed based on serial # or other Unique ID # and/or by attaching barcode or RFID labels that uniquely identify assets. Asset data from backend procurement and ERP systems populates AssetTracker^{IoT}.

1 Asset data is exported from backend system(s) to establish initial database registry within Asset Tracker^{IoT}.

2 Assets are physically inventoried to reconcile the existence of assets and data about assets, including serial #'s and data identifiers.

3 Barcode, RFID or barcode/RFID labels are attached to each asset for streamlined management for future asset management requirements.

4 The status of assets is maintained and tasks including inspections, calibrations and maintenance are monitored, with alerts, messages and calendar of events.

5 Maintenance and insurance agreements are monitored and maintained.

ASSET TASK MANAGEMENT

AssetTracker^{IoT} includes robust task management and workflow processing capabilities to maintain and manage the disposition of assets over time, providing management with complete visibility of asset locations, statues and utilization.

1 Monitors tasks such as inspections, cleanings, calibrations and maintenance with corresponding alerts, messages and calendar events.

2 Supports sophisticated workflow routines to define multiple steps required for a task, including approvals and sign-offs.

3 AssetTracker^{IoT} dashboard provides real-time visibility of all assets, asset locations, asset tasks and future asset utilization calendaring.

4 Extensive standard reports and unlimited custom reports.

5 All events related to all assets, within the database or associated with physical assets, create and maintain precise audit trail records of all assets.

EXPERIENCE YOU CAN COUNT ON

The most proven indicator of future success is prior performance.

AssetTracker^{IoT} asset management experience dates to 1991 for implementation of asset tracking for Occupational Health and Safety (OSHA) laboratory assets.

AssetTracker^{IoT} has been optimized based on inputs from commercial and government customers worldwide.

When you want the best, choose AssetTracker^{IoT} .
