# RFID AND BARCODE WAREHOUSE MANAGEMENT

# WAREHOUSE MANAGEMENT PLATFORM

IoT Warehouse Tracker software is designed to optimize warehouse work functions through the use of barcode and RFID tracking technologies utilized with mobile scanners and tablets.

- 01 Integrates with backend WMS and ERP systems to match operations to core warehouse data, to ensure accurate and complete workflows.
- 02 Validate accurate receipt of goods against procurement data and shipping documents.
- 03 Enables enrollment of incoming goods and outbound forwarding of goods to internal and external constituents.
- 04 IoT Warehouse Tracker defines the location and status of all warehouse goods at all times, including serialized and non-serialized items.
- 04 Warehouse data displays as Dashboard for instant view of all goods and inventory as graphs and charts, providing accurate warehouse visibility.

## RECEIVING AND FORWARDING

IoT Warehouse Tracker manages the receipt and dispatch of goods matching paperwork and computer system data, and enables enrollment of any goods that have not been imported to Warehouse Tracker IoT from backend computer systems.

- 01 IoT Warehouse Tracker supports the printing of RFID and barcode labels, and the serialized labels that are commissioned to the database matching the goods.
- 02 Assets are physically inventoried to reconcile the existence of assets and data about assets, including serial #'s and data identifiers.
- 03 Supports both serialized goods and non-serialized 'bulk' goods.
- 04 Shelf/bin locations and goods are scanned at time and location placed into storage, using mobile scanners and tablets.
- 04 Goods can be pulled and dispatched using computer workstations, or using mobile scanners and tablets real-time while items are being pulled.

## INVENTORY COUNTS

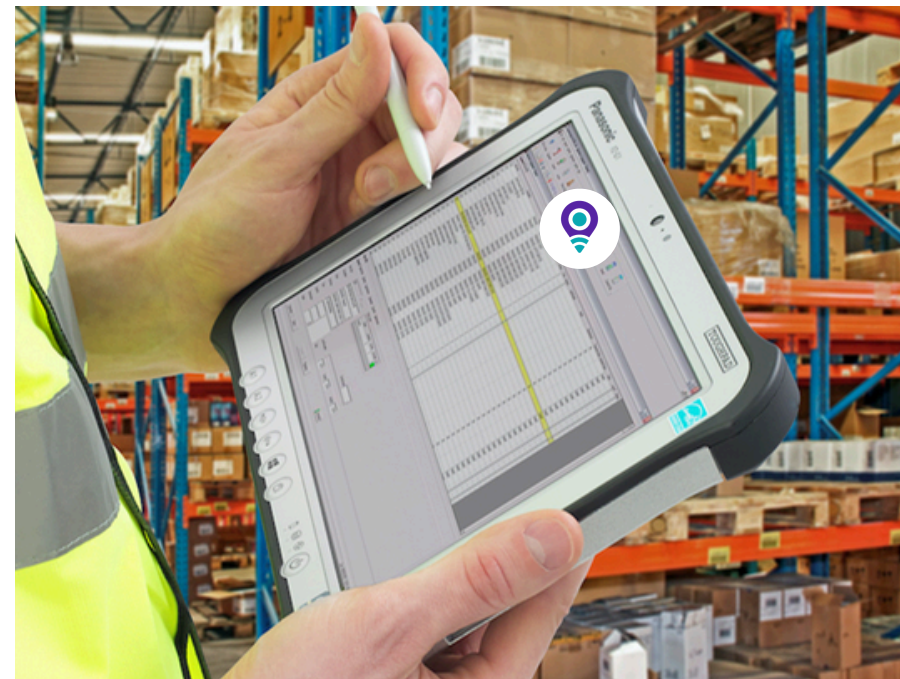

IoT Warehouse Tracker helps to ensure that warehouse inventories are accurate and up to date, and to prevent stockouts and overages to optimize operational efficiencies, reduced costs and improved customer service and retention.

- 01 Includes scanning of serialized item RFID or barcode labels, or software item lookups, and supports incrementing and decrementing of bulk items using
- 02 mobile scanner to scan item-type barcodes and to increment or decrement.
- 03 Also enables audits of goods in storage per location, with scanning of items at each storage location with real-time adjudication:
  - Expected and located
  - Expected and not located
  - Unexpected and located
- 04 Missing objects can be rapidly located with mobile scanner using cold-warm-hot color scale, 0 to 100 numeric index and frequency of scanner beeps.

## MOBILE COMPUTING

Managing warehouse operations most efficiently requires the use of mobile devices. WarehouseTracker supports the use of mobile scanners, smartphones and tablets to work on-the-go for execution of warehouse operational tasks.

- 01 Supports the use of scanners with barcoding, Bluetooth and RFID technologies.
- 02 Mobile RFID/barcode scanners are paired to smartphones and tablets for rapid scanning of item RFID and barcode labels and shelf/bin/pallet barcodes.
- 03 WarehouseTracker dashboard provides real-time visibility of all warehouse goods, locations, work processes and required actions.
- 04 Extensive standard reports and unlimited custom reports.
- 05 All events related to all warehouse goods create and maintain precise audit trail records of all events from original receipt through final disposition.

# EXPERIENCE YOU CAN COUNT ON

The most proven indicator of future success is prior performance.

IoT Warehouse Tracker streamlines operations, increases efficiencies, reduces costs, improves customer service, enhances customer retention and maximizes profitability.

IoT Warehouse Tracker has been optimized based on inputs from commercial and government customers worldwide. When you want the best, choose IoT Warehouse Tracker.
