

Tracking, Accountability and Security

LAW ENFORCEMENT PROPERTY AND EVIDENCE

Software and technology for compliance and best practices

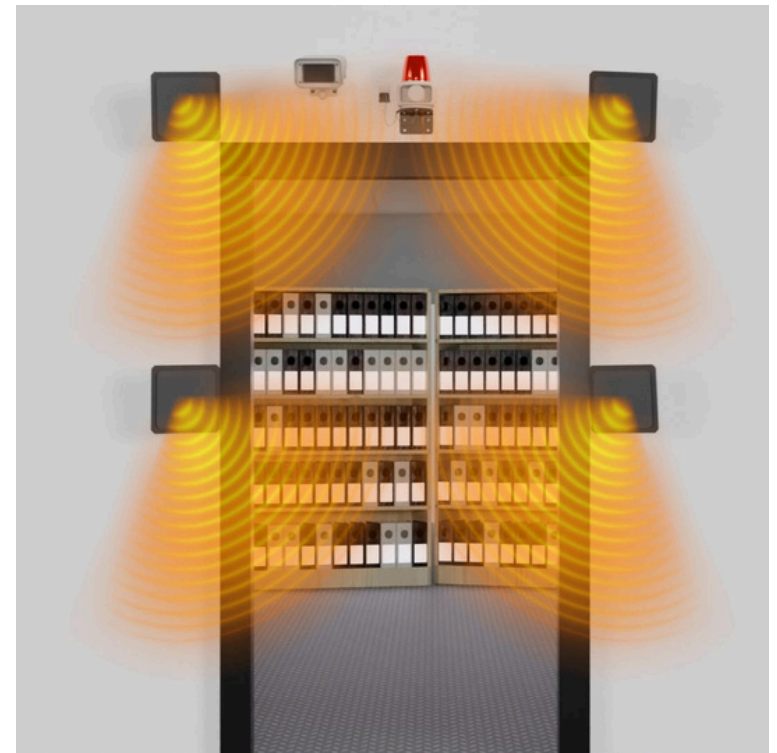

THE IOTEVIDENCETRACKER PLATFORM

- Comprehensive property-evidence software configured to each customer's exacting data, tracking, workflow, security and reporting requirements.
- Integrated with RFID and barcode technologies for tracking property and evidence to storage locations, for audits and inventories, and to rapidly find needed or missing objects.
- Supports security technologies including alarm-lights at exits, fingerprint and PIN # recognition to authenticate personnel and electronic signature pads to validate transfer-of-custody.
- Supports digital scales for accurate measurements of narcotics for input of weights to software without manual entry

RFID REAL-TIME TRACKING ZONES

- RFID antennas connect to networks just like computers or other devices to establish RFID detection zones that automatically track property and evidence as items move from one location to another location and when being removed-from or being returned-to storage rooms.
- Antennas can be integrated with alarms, flashing lights and cameras to prevent the unauthorized removal of property-evidence from storage, within facilities or from one area of the facility to another area of the facility, and at facility exits.
- RFID at property-evidence storage room and facility exit points tracks movements and prevents unauthorized property-evidence removal triggering lights, alarms, video and alerts.

IOTEVIDENCETRACKER MOBILE COMPUTING

- Supports the use of phones, tablets and mobile barcode / RFID scanners within facilities or anywhere officers are operating
- Register evidence with data, photos and video when evidence is originally seized through remote updates to the database
- Scan storage locations and property-evidence items being placed into storage to know exactly where all items are stored within the storage system
- Scan items removed from storage and transfer to destinations
- System audits and inventories from distances up to 30'
- Find missing items with beeps and cold-warm-hot color scale

IOTEVIDENCETRACKER SMART STORAGE

- IoTEvidenceTracker supports traditional storage and locker systems for in-room storage and for pass-through storage.
- IoTEvidenceTracker also integrates with Smart Lockers that include built-in tablet PC's that authenticate officers by fingerprint, ID card and/or PIN #.
- Smart Lockers support the use of RFID technology for automated tracking of property and evidence as items are placed into storage or removed from storage.
- Smart Storage integrates with the full IoTEvidenceTracker system for compliance, security and optimized tracking.

- The most proven indicator of future success is prior performance.
- IoTEvidenceTracker RFID experience dates to 2006 with implementation of RFID Technology for the State of Maryland law Enforcement.
- IoTEvidenceTracker has been further optimized and continually improved based on inputs from global military, police and security organizations worldwide.
- When you want the best, choose EvidenceTracker.
