

Automate Armory Operations and Prevent Weapon Theft

POLICE AND MILITARY SMART, SECURE WEAPONS STORAGE

Configurable Weapon Racks

Weapon racks utilize physical height and unlimited fixtures to store weapons, gear and ammo to maximize space utilization and to facilitate fast and easy weapon removals and returns.

- Configurable storage system for weapons
- Straight-line access and comprehensive view of inventory
- Customizable racks with enclosures/doors and locking mechanisms

Smart Sidearm Lockers

IoTWeaponTracker offers a wide range of lockers for storage of weapons, gear and ammo.

Weapon lockers can be utilized with armorers overseeing Issues and Returns and/or as self-service operations.

Weapon lockers are produced of hardened steel and aggressive locking mechanisms that both manage Storage, Issues and Returns, but also which make it difficult for 'bad actors' to breach an armory and steal weapons.

Smart Longarm Clamps & Mounts

Typical weapon storage cabinets must have tops, sides and doors to store weapons, and have a single locking point...a single lock per weapon cabinet...which can be breached with a bolt cutter in seconds.

Smart clamps and butt holders secure weapon holders to weapon racks that are securely attached to floor and wall(s). Smart weapon racks enable high density storage of weapons while providing security of the entire storage system as well as secure locking of for each weapon for maximum weapon theft prevention.

Personnel Authentication

Weapon tracking starts with personnel authentication, to ensure that weapons, gear and ammo are only accessible-to, issued-to or removable-by personnel that have approved permissions.

ARM/Do Not ARM and weapons certification database lookups ensure that weapons are only available to approved personnel based on business rules.

IoTWeaponTracker supports fingerprint, ID Card chip, phone and PIN # entry to authenticate personnel and for personnel to access smart storage lockers and security racks.

Real-Time RFID Tracking

Weapons and tasers, gear, magazines and evidence can be stored in Smart Lockers and Smart Racks to detect when weapons, gear, magazines or evidence are being removed or returned. And to whom Issued-to or from whom-Returned, including time/date.

Lockers have optional RFID antennas that can be inserted into lockers and smart weapon rack butt holders that have RFID that automatically, real-time track weapon, gear & ammo movements.

Scales for Ammo Control

One of the most important responsibilities of armories is to ensure that when weapons are returned after duty cycles, that the magazines issued with the weapons are returned, and that there are no missing rounds from magazines.

IoTWeaponTracker sidearm lockers can be equipped with pistol scales, to ensure that when weapons are returned, that the magazine has been removed. Magazine scales within sidearm lockers also have option for scales, which weigh magazines to ensure that there are no missing round.

The most proven indicator of future success is prior performance.

IoTWeaponTracker weapon management dates to 2007 with digitization of the U.S. Department of State's global weapon, gear and ammo inventory.

IoTWeaponTracker has been further optimized and continually improved based on inputs from global military, police and security organizations, and our business partners worldwide.

When you want the best, choose IoTWeaponTracker.
